

10 More Sustainability Tips

1. Recycle everything you can and purchase items made from recycled materials.
2. Eat a more climate friendly diet with less meat and more locally sourced fruits, veggies, and grains. Pasture raised and finished meats are better too.
3. Before throwing something in the trash, think about ways it could be reused, repurposed, or possibly donated or fixed up.
4. Save energy by drying your clothes on a clothesline instead of running the dryer.
5. Purchase an old fashioned reel lawn mower or save up for a new electric one. They both have zero emissions.
6. Plant a tree! If possible plant it on the south side of your house to shade it in the summer and reduce the amount you have to cool with AC.
7. Bring your reusable bags everywhere you will buy or gather things (clothing stores, home improvement stores, office supply stores, the dentist, library, etc.)
8. Consider the packaging used and possible alternatives when purchasing products.
9. Use a reusable coffee cup, water bottle, and other daily use items.
10. Set up a rain barrel system at your house to water your garden and lawn.
